

Leading Employer Benefits Solution for Digestive Care

Easy, convenient, and personalized

Problem: Gastrointestinal Illnesses

✓ High Prevalence, gaps in care

75% of 60M people with GI symptoms are misdiagnosed or underdiagnosed, resulting in lost productivity due to frequent ER visits, expensive and invasive procedures, and pharmaceutical interventions.

✓ Runaway costs for employers

GI illness is the fastest growing healthcare expense category for employers driven by the cost of biologics and ER Visits. 40% of people suffer from multiple cardiometabolic conditions that are linked to poor digestive health attributing to **\$350B+ of healthcare claims**.

✓ High levels of Comorbidity

78% of adults with GI-related illnesses struggle with **co-occurring obesity and behavioral illnesses**.

✓ Low Satisfaction, and No 'Root Cause' solutions

On average, employees wait 100+ days to see a GI specialist, resulting in lost time and unnecessary costs. Additionally, disease risks vary significantly by gender and ancestry and are linked to **genetics and gut microbiome**, yet no current treatment options incorporate all of these diagnostics and solve for the root cause of illnesses.

Defining Digestive Healthcare

Breaking the Cycle of Misdiagnosis, High Cost, Social and Professional Stigma, Poor Health Outcomes, and Low Patient Satisfaction

We continue to lead through innovation and are defining what digestive health care should be: **Easy, convenient, and whole person-centered**.

We provide individuals with genetic and gutmicrobiome diagnostics, and personalized treatment with 24/7 access to a multidisciplinary care team of doctors, nurses, dietitians, personal coaches, and genetic and gut microbiome experts, all from the privacy of home. Digbi Health empowers individuals with critical insights to treat the root cause of their illness to take control of their health.
